Excercise 3 :Develop and compare CLI, GUI, and Voice User Interfaces
(VUI) for the same task and assess user satisfaction using Python (Tkinter for GUI, Speech Recognition for VUI), Terminal

#### AIM:

The aim is to develop and compare Command Line Interface (CLI), Graphical User Interface (GUI), and Voice User Interface (VUI) for the same task, and assess user satisfaction using Python (with Tkinter for GUI and Speech Recognition for VUI) and Terminal.

#### **PROCEDURE:**

### i) CLI (Command Line Interface)

CLI implementation where users can add, view, and remove tasks using the terminal.

```
□tasks = []

def add_task(task):
    tasks.append(task)
    print(f"Task '{task}' added.")

def view_tasks():
    if tasks:
        print("Your tasks:")
        for idx, task in enumerate(tasks, 1):
            print(f"{idx}. {task}")
        else:
```

```
print("No tasks to show.")
def remove_task(task_number):
  if 0 < task_number <= len(tasks):
    removed_task = tasks.pop(task_number - 1)
     print(f"Task '{removed task}' removed.")
  else:
     print("Invalid task number.")
def main():
  while True:
     print("\nOptions: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit")
     choice = input("Enter your choice: ")
    if choice == '1.':
       task = input("Enter task: ")
       add task(task)
     elif choice == '2.':
       view tasks()
     elif choice == '3':
       task_number = int(input("Enter task number to remove: "))
       remove_task(task_number)
     elif choice == '4':
       print("Exiting...")
       break
     else:
       print("Invalid choice. Please try again.")
if __name__ == "__main__":
  main()
```

#### **OUTPUT:**

```
Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 1
Enter task: finish assignment
Task 'finish assignment' added.

Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 1
Enter task: finish writing notes
Task 'finish writing notes' added.

Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 1
Enter task: go get groceries
Task 'go get groceries' added.

Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 2
Your tasks:
1. finish writing notes
3. go get groceries
Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 2
Your tasks:
1. finish writing notes
3. go get groceries
Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 3
Enter task number to remove: 1
Task 'finish assignment' removed.

Options: 1.Add Task 2.View Tasks 3.Remove Task 4.Exit
Enter your choice: 3
Enter task number to remove: 1
Task 'finish assignment' removed.
```

# ii) GUI (Graphical User Interface)

Tkinter to create a simple GUI for our To-Do List application.

```
import tkinter as tk
from tkinter import messagebox

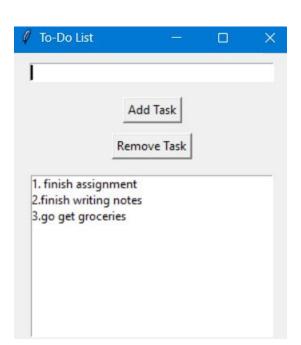

tasks = []

def add_task():
    task = task_entry.get()
    if task:
        tasks.append(task)
        task_entry.delete(0, tk.END)
        update_task_list()
    else:
        messagebox.showwarning("Warning", "Task cannot be empty")

def update_task_list():
    task_list.delete(0, tk.END)
    for task in tasks:
        task_list.insert(tk.END, task)
```

```
def remove_task():
  selected_task_index = task_list.curselection()
  if selected_task_index:
    task_list.delete(selected_task_index)
    tasks.pop(selected_task_index[0])
app = tk.Tk()
app.title("To-Do List")
task_{entry} = tk.Entry(app, width=40)
task_entry.pack(pady=10)
add_button = tk.Button(app, text="Add Task", command=add_task)
add_button.pack(pady=5)
remove_button = tk.Button(app, text="Remove Task", command=remove_task)
remove_button.pack(pady=5)
task_list = tk.Listbox(app, width=40, height=10)
task_list.pack(pady=10)
app.mainloop()
```

#### **OUTPUT:**

## iii) VUI (Voice User Interface)

speech\_recognition library for voice input and the pyttsx3 library for text-to-speech output. Make sure you have these libraries installed (pip install SpeechRecognition pyttsx3).

```
□ import speech recognition as sr
import pyttsx3
tasks = []
recognizer = sr.Recognizer()
engine = pyttsx3.init()
def add_task(task):
  tasks.append(task)
  engine.say(f"Task {task} added")
  engine.runAndWait()
def view_tasks():
  if tasks:
    engine.say("Your tasks are")
    for task in tasks:
       engine.say(task)
  else:
    engine.say("No tasks to show")
  engine.runAndWait()
def remove_task(task_number):
  if 0 < task_number <= len(tasks):
    removed_task = tasks.pop(task_number - 1)
    engine.say(f"Task {removed_task} removed")
  else:
    engine.say("Invalid task number")
  engine.runAndWait()
def recognize_speech():
  with sr.Microphone() as source:
    print("Listening...")
    audio = recognizer.listen(source)
       command = recognizer.recognize_google(audio)
```

```
return command
    except sr.UnknownValueError:
       engine.say("Sorry, I did not understand that")
       engine.runAndWait()
       return None
def main():
  while True:
    engine.say("Options: add task, view tasks, remove task, or exit")
    engine.runAndWait()
    command = recognize_speech()
    if not command:
       continue
    if "add task" in command:
       engine.say("What is the task?")
       engine.runAndWait()
       task = recognize_speech()
       if task:
         add task(task)
    elif "view tasks" in command:
       view tasks()
    elif "remove task" in command:
       engine.say("Which task number to remove?")
       engine.runAndWait()
       task_number = recognize_speech()
       if task_number:
         remove_task(int(task_number))
    elif "exit" in command:
       engine.say("Exiting...")
       engine.runAndWait()
       break
    else:
       engine.say("Invalid option. Please try again.")
       engine.runAndWait()
if name == " main ":
  main()
```

**OUTPUT:** 

```
Listening...
Task Take printout of UID
Listening...
Task Finish observation
Listening...
Your tasks are: Take printout of UID Finish observation
Listening...
Task Finish observation removed.
Listening...
Exiting
```

## **RESULT:**

Thus the codes to develop and compare CLI, GUI, and Voice User Interfaces (VUI) for the same task and assess user satisfaction using Python (Tkinter for GUI, Speech Recognition for VUI), Terminal have been executed successfully.
